

LinkedIn Content Creator Workflow

What It Does (Work Explanation)

The **AI Agent** acts as the content creator — it uses AI (via the **OpenRouter Chat Model**) to generate LinkedIn post ideas or full posts automatically.

Here's the **step-by-step flow** in the image:

- 1. Trigger – “When clicking ‘Test workflow’”**
Starts the workflow manually (you can also use the **Schedule Trigger** below for automation).
- 2. Get Topic (Google Sheets)**
Reads a content topic from a Google Sheet (for example, “AI in Marketing”).
- 3. Tavily (API Call)**
Fetches research or supporting content from the **Tavily API** (a web search API) about the topic.
- 4. AI Agent (Tools Agent)**
 - Uses **OpenRouter Chat Model** (e.g., GPT-4 or Claude) to process the research from Tavily.

- It generates LinkedIn post content (headline, post body, hashtags, etc.).
- Optionally, it can use memory and tools for multi-step reasoning or formatting.

5. **Google Sheets (Update)**

Saves the generated LinkedIn post back to Google Sheets — ready for review or publishing.
