

Calendar AI Chatbot

Interactive Calendar AI Chatbot

The entire diagram represents an automated, multi-step conversation process, essentially creating an **intelligent chatbot or assistant**.

1. **Trigger:** The process starts **"When chat message received"** (e.g., from a chat platform like Telegram, Slack, etc.).
2. **Core Processing:** The message goes to the **"AI Agent"**.
3. **Brain and Memory:** The Agent uses the **"Google Gemini Chat Model"** for its language understanding and generation, and the **"Simple Memory"** to maintain conversation context.
4. **Action/Tool Use:** Based on the user's query, the Agent can intelligently decide to use specific tools, such as:
 - *If the user asks about a person:* Use **"Get Contact Data"**.
 - *If the user asks to schedule something:* Use **"event calendar toll/tool"**.
5. **Output:** The Agent sends its final, informed response out to complete the interaction.
